

New packaging -  
improved formula

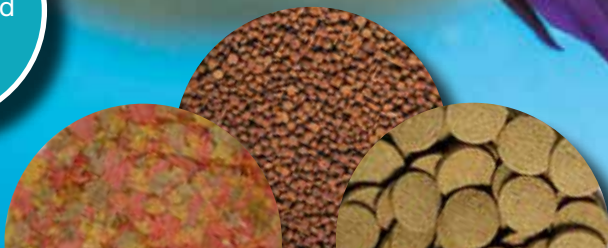

**EHEIM**

Natural  
healthy  
food

With  
fresh  
kelp

With vital trace  
elements and  
vitamins

For fresh- and marine water

## Food & water care

# EHEIM food for fresh- and marine water

Healthy diet – ideal for both fish and water. Natural and fresh ingredients.

## EHEIM food

No harmful contents, extremely digestible, less water pollution and no clouding. Your fish will love it.

### Flakes

This food consists of flakes of various sizes and mixtures. The flakes swell up in water and then slowly sink to the bottom, ensuring the food reaches all the fish in all areas of the aquarium.

### Granules

Granules consist of small compressed pieces which remain stable for a long time in water. They absorb water and are eaten whole by the fish and for this reason, the size of the granules must suit the size of the fish. Granules are especially suitable for cichlids.

### Tablets

Tablets are the best form of food for demersal (bottom-dwelling) species of fish. They consist of pressed flakes and sink quickly to the bottom. Tablets are useful for examining fish as they spend a long time nibbling at them.

# EHEIM water care for fresh- and marine water

The perfect supplement to EHEIM technology. Outstanding products. Without aggressive chemicals. At one with nature.

For fish-  
friendly water

## **EHEIM aquaCARE**

For binding heavy metals and harmful substances in tap water. Treatment of the tap water for natural water quality, immediate binding of harmful substances such as chlorine and heavy metals, enrichment of the water with valuable vitamins for stress reduction and the protection of mucous membranes.

## **EHEIM bacteriaSTART**

Natural bacterial cultures for inoculating filter material. Concentrated, freeze-dried mixture of natural bacterial cultures for inoculating filter material. Reduces harmful substances, especially nitrogen components, promotes biological self-cleaning and regenerates organically contaminated water. Extends the lifetime of the filter. The bacterial species complex is specifically for fresh water aquariums.

Acts  
reliably  
against  
algae

## **EHEIM nitratBIOex**

For the initial filling and water change – for the active decomposition of nitrate in fresh water and saltwater aquariums. Immediate biological activity, removes harmful organic substances from the aquarium in a very short period of time, lowers the nitrate level, reduces organic sludge on the bottom and in the filter.

For fast  
nitrate  
removal

## **EHEIM Algozid**

Biocide for algae control. Provides reliable help, even in case of acute algae infestation – as a precaution and to prevent the formation of new algae. Reliable algae control for green, beard, brush and blue-green algae.

## **EHEIM water care**

is based on natural micro-biological substances. This means careful improvement of the water quality without disturbing the ecological balance. In principle, water care products should always be used sparingly.

## Accessories

### EHEIM autofeeder

Compact equipment with a feeding chamber; mainly for flake food

- Easy to understand programming
- An additional programme for double feeding

### EHEIM feedingSTATION

The EHEIM feedingSTATION serves your fish's meals underwater, at a fixed location.

- The food is delivered underwater, via the chamber, to the same location every time
- There is very little waste from food dispersal
- Everything is eaten
